## **CLAIMS:**

5

10

25

1. An apparatus for deforming a sheet material, said apparatus comprising:

- a) a deforming roller comprising a plurality of circumferential depressions; and
- at least one cord in rotational engagement with said roller and adapted to press
  said sheet material into said circumferential depressions.
- 2. The apparatus of Claim 1 wherein said circumferential depressions are formed between land areas.

3. The apparatus of Claim 1 wherein said circumferential depressions are grooves formed between circumferential peaks.

- 4. The apparatus of Claim 1 wherein said at least one cord is a single unending cordcarried on at least two guide rolls.
  - 5. The apparatus of Claim 2 wherein said land areas comprise projections adapted to aperture said sheet material.
- 20 6. The apparatus of Claim 3 wherein said circumferential peaks comprise projections adapted to aperture said sheet material.
  - 7. The apparatus of Claim 1 further comprising a heater adapted to apply heat to said sheet material.
  - 8. The apparatus of Claim 6 further comprising a heater adapted to apply heat to said sheet material.

K-C 19631 EL 955701926 US

9. A method for deforming a sheet material, said method comprising:

- a) providing a rotating deforming roller comprising a plurality of circumferential depressions;
- b) providing at least one cord, said cord aligned to fit within said depressions;
- c) providing at least one sheet material;

- feeding said sheet material in a first direction between said roller and said cord;
  and
- e) deforming said sheet material by pressing said sheet material at least partially into said circumferential depressions with said cord.
- 10. The method of Claim 9 wherein said deformation comprises extension of said sheet material in a direction substantially perpendicular to said first direction.
- 11. The method of Claim 9 wherein said circumferential depressions are grooves formed between circumferential peaks.
  - 12. The method of Claim 11 wherein said circumferential peaks comprise projections and wherein said deformation comprises aperturing said sheet material.
  - 13. The method of Claim 9 wherein said circumferential depressions are formed between land areas.
  - 14. The method of Claim 9 further comprising applying heat to said sheet material.
  - 15. The method of Claim 14 wherein said deformation comprises forming topographical features in said sheet material.

K-C 19631 EL 955701926 US

16. The method of Claim 9 wherein said sheet material comprises a nonwoven web material.

- 5 17. The method of Claim 9 wherein said sheet material comprises a film material.
  - 18. The method of Claim 10 wherein said sheet material comprises a nonwoven web material.
- 10 19. The method of Claim 10 wherein said sheet material comprises a film material.
  - 20. The method of Claim 10 wherein said sheet material comprises a laminate comprising a nonwoven web material and a film material.
